Listing of Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

1.   (Previously Presented)   A method for providing a data stream to a client from a source in an enclosed and secured network including:

receiving a request for a data stream from a client at an operator server;

passing the request for the data stream from the operator server to a central server;

verifying the identity of the client;

supplying the client with a data stream from the source, the data stream optimized by a choice of path; and

setting up a secured channel at the same time as said supplying, said secured channel reserved for optional feedback from the client during receipt of the requested data stream.

2.   (Original)   The method of claim 1, wherein the source is a provider and/or distributor of services, information, or goods, the sale or distribution thereof ensured by said data stream transfer.

3.   (Cancelled)

4.   (Withdrawn)   The method of claim 1, further including inserting an identification of the source and of the client into said data stream at the time of said supplying.

5.   (Previously Presented)   The method of claim 1, wherein the data stream is optimized by time.

6.   (Previously Presented)   The method of claim 1, wherein the data stream is optimized by a distribution method.

7.   (Previously Presented)   The method of claim 1, wherein said passing includes passing the request for the data stream from the operator server through a national server to a central server.

8.   (Previously Presented)   The method of claim 1, further comprising verifying an identity of the source.

9.   (Previously Presented)   The method of claim 8, wherein said supplying further comprises including the identify of the client and the identity of the source into the data stream.
